## THE FAST-TRACK TO O&K SPARE PARTS. RELIABLE & COST EFFECTIVE.

There are suppliers who promise you the world but then fail to deliver. At TGS, we do things differently. We always deliver on our promises because we only promise what we are 100% sure we can deliver.

The words "Made in Germany" carry a worldwide reputation for excellence, and rightly so. With its precision, quality of materials and attention to detail, German engineering is central to the success of many international companies, in every sphere of business. The same applies to mining technology. World-leading manufacturers like O&K set mining standards across the world. As well as providing the original "Made in Germany" components with which the mining machines are 95% equipped.

TGS is a proud O&K Mining Dealer in Africa and we specialise in all parts of the O&K fleet, from the CAT 6015/RH40 to the CAT 6090/RH400, all undercarriage, nuts & bolts, auxiliary parts - hooters, joysticks, foot pedals, all valves, pump drives, gear boxes and all pins and bushes. We also supply and stock electrical parts such as sensors, switches and wires, directly from the original parts and equipment manufacturers, cutting out the middle man which allows us to be very competitive in our pricing.

TGS also has its own Technical Mining Specialists that can assist with fault finding, major repairs, rebuild planning and preventative maintenance advice to ensure that these assets perform to designed capacity.

*With TGS you get a great deal more than a full range of OEM spares and components. You also get to enjoy outstanding customer service.*

## OEM QUALITY

As a long-standing supplier of the world's leading OEM manufacturers, TGS can supply the majority of key parts and components on demand - directly from the OEM. This guarantees you a perfect fit, every time, as well as a full manufacturer's warranty, which means that your valuable plant and equipment will quickly be back up and running, earning you money.

## KNOW-HOW

A really good business relationship is based on trust, something which significantly relies on competence: subject-specific expertise and a deep knowledge of technical compatibility. At TGS, we see this as a defining characteristic of our business philosophy. We have enjoyed many years of experience in the mining industry, and during this time we have acquired an unparalleled technical knowledge in all areas.
