DIESEL ENGINE COMPONENTS

CTP Engine Parts are designed and manufactured to work hard as an integrated system. Continuous improvement in our engineering and manufacturing ensures that our customers receive the best quality products available in the market.

We aim to constantly innovate and change how the industry looks at replacement parts.

Liners (Camisas)

Designed for use in high mileage in-frame rebuilds, CTP Wet Liners are manufactured to meet and surpass stringent design specifications.

A wet liner has no supporting bore structure and it is held in place by the flange, the flange has to withstand and endure continuous bending and flexing forces. To overcome these stresses all CTP liners receive a Deep Pressure Roll burnishing on the radius directly below the flange. This process strengthens the flange area by more than 50% and reduces metal fatigue, preventing liner fractures. The liners are induction hardened to decrease premature surface wear. All CTP liners receive a special coating to minimize cavitation damage and resist corrosion.

Diseñadas para reparaciones en vehículos de alto millaje, las camisas CTP están fabricadas para cumplir y sobrepasar las especificaciones de diseño más estrictas. Las camisas húmedas no tienen una estructura de soporte y se mantienen en su lugar por la brida, la cual tiene que soportar fuerzas de flexión. Para asegurarnos que las camisas CTP aguantan estas tensiones, estas son sometidas a un proceso de pulido profundo en el radio directamente debajo de la brida. Este proceso fortalece el área de la brida en más de un 50% y reduce la fatiga del metal, evitando así las fracturas de la camisa. Las camisas pasan por un tratamiento de inducción para disminuir el desgaste prematuro de la superficie. Todas las camisas CTP tienen un recubrimiento especial para reducir al mínimo el daño por cavitación y resistir la corrosión.

Engine Bearings (Cojinetes)

CTP Engine Bearings are constructed of multiple layers, comprised of different metal alloys. The most common is the Tri-metal bearing; composed of a steel backing, followed by a copper plated layer with a lead-tin alloy surface. The Bi-metal bearing has a steel backing with an aluminum bearing alloy. These bearing composites are engineered for durability, conformability and embeddability, while providing high strength and high wear resistance. The aluminum alloy bearings are designed to increase thermal transfer to draw damaging heat away from critical surfaces.

Los cojinetes están fabricados con múltiples capas compuestas de diferentes aleaciones metálicas. El más común es el cojinete Tri-metal; compuesto de un soporte de acero, seguido de una capa de cobre con una superficie de aleación de plomo. El cojinete Bi-metal tiene una capa de acero con una aleación de aluminio. Estos materiales compuestos están diseñados para proporcionar una larga durabilidad y alta resistencia al desgaste. Los cojinetes de aleación de aluminio están diseñados para aumentar la transferencia térmica para mantener el calor dañino lejos de superficies críticas.

Piston (Pistón)

CTP Aluminum Pistons are manufactured out of hypereutectic aluminum with a special heat treatment that modifies and improves the grain structure for added strength and durability. The aluminum hypereutectic alloy provides good wear resistance due to its extreme hardness. The unique characteristics of this alloy provides the piston with exceptional high strength and stiffness that reduces scuffing, while retaining dimension consistencies during thermal expansions therefore improving power, fuel economy and service life.

Los pistones CTP están fabricados de aluminio hipereutéctico con un tratamiento térmico especial que modifica y mejora la estructura para brindar mayor resistencia y durabilidad. La aleación de aluminio hipereutéctico ofrece buena resistencia al desgaste debido a su extrema dureza. Las características únicas que esta aleación proporciona al pistón con alta resistencia y rigidez reduce el desgaste abrasivo y conserva las dimensiones consistentes durante las expansiones térmicas, por tanto, mejora la potencia, la economía de combustible y su vida útil.

Crankshaft (Cigüeñales)

CTP Crankshafts are made out of forged steel, for strength and durability. The forging process allows for the continuity of material grain flow which assists in the transmission of stresses for maximum strength and reliability. All crankshafts are balanced to perfection, both statically and dynamically to provide a smooth and vibration free operation.

Los cigüeñales CTP están hechos de acero forjado para proporcionar alta calidad y resistencia. El proceso de la forja permite la continuidad del grano del material, asistiendo la transmisión de las tensiones para ofrecer máxima resistencia y confiabilidad. Todos los cigüeñales se balancean a la perfección, tanto estática como dinámicamente para proporcionar una operación suave y libre de vibración.

Rods (Bielas)

CTP New Replacement Connecting Rods are machined from high-tensile forged steel for high durability. With increased strength and a lightweight design, these connecting rods improve strength more than any other replacement offerings. CTP Connecting Rods are an economically priced alternative to the time and expense involved in salvaging and reworking used connecting rods.

Las bielas de reemplazo CTP están diseñadas con acero forjado para ofrecer una gran resistencia. Con el aumento de la fuerza y su diseño ligero, estas bielas brindan más resistencia que cualquier otra ofrecida en el mercado de accesorios. Las bielas CTP son una alternativa al original con mejores precios para sus reparaciones.

Piston Rings (Anillos de Pistón)

CTP Steel compression rings come with several types of coatings; Moly, Chrome and Ceramic PVD Coatings. These coatings offer higher tensile strength and greater hardness, while offering improved stress resistance and durability. Our secondary compression rings are manufactured out of non heat treated grey cast iron for better conformability that improves oil control. Our low tension oil rings reduce friction and cylinder wear for longer service life.

Anillos de pistón CTP están hechos de varios tipos de recubrimientos: molibdeno, cromo y PVD de cerámica. Estos recubrimientos ofrecen una mayor resistencia a la fricción, una mejor dureza, mejor durabilidad y resistencia al estrés. Los anillos secundarios se fabrican de hierro de fundido para una mejor adaptabilidad mejorando el control de aceite. Nuestros anillos de aceite de baja tensión reducen la fricción y el desgaste del cilindro para ofrecer una vida útil más larga.

Valves (Válvulas)

CTP valves are manufactured under strict guidelines and design parameters to ensure a reliable product. The proper type of material and design is crucial to the valve operating performance and reliability. Our valves are manufactured from specific alloys depending on the application. Some of these specialty alloys include Stellite™ and Inconel™ two superalloys that are used for their outstanding hardness and toughness and also for their oxidation and corrosion resistant properties, that are well suited for service in extreme high temperature environments subjected to pressure like today's Diesel engines.

Las válvulas CTP están fabricadas bajo parámetros de diseño estrictos para garantizar un producto confiable. El uso del material y diseño adecuado es crucial para el rendimiento operativo de la válvula. Nuestras válvulas se fabrican de aleaciones específicas dependiendo de la aplicación. Algunas de estas aleaciones especiales incluyen Stellite™ y Inconel™ dos super aleaciones que se utilizan para lograr su dureza y resistencia a la oxidación y la corrosión, bien adaptados para el servicio en ambientes de temperaturas extremas y sometidos a la presión de los motores Diesel de hoy.

ENGINE BLOCKS

Two of the most popular engines in the heavy equipment industry are the 3304 and 3306. For the past thirty years, hundreds of thousands of these engines have been produced and are still in service. CTP offers these two workhorse engines at a great value.

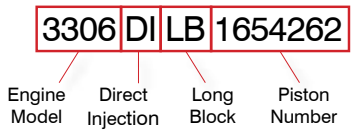
CUSTOM ENGINES

Two of the most popular and versatile engines in heavy equipment are engines 3304 and 3306. For the past 30 years, hundreds of thousands of these engines have been produced and are still in service. CTP offers these two workhorse engines at a great value.

A new CTP engine offers several advantages over a re-manufactured or used engine. One of the key benefits is time, often we can assemble a custom made engine in just a few short days, this means getting your equipment back into service quicker. Another key factor is that the engine contains all new components that will last a very long time.

	Description
PC	**PRE-COMBUSTION** (Pre-Combustion type cylinder head)
DI	**DIRECT INJECTION** (Direct injection type cylinder head)
SB	**SHORT BLOCK** (Complete engine assembly, no cylinder head no oil pump)
MB	**MEDIUM BLOCK** (complete engine assembly, w/cylinder head no oil pump)
LB	**LONG BLOCK** (Complete engine assembly, w/cylinder head & oil pump)

How the CTP engine numbering system works:



Long block engines come completely assembled with NEW:

- ✓ Block
- ✓ Block Plate
- ✓ Wet Liners
- ✓ Cam Bearings
- ✓ Crankshaft
- ✓ Connecting rods
- ✓ Piston & Rings
- ✓ Gaskets
- ✓ Camshaft & Lifters
- ✓ Cylinder Head Assy
- ✓ Oil Pump
- ✓ Seals

†Some engines could take up to 3 weeks to complete, based on parts availability.

INFRAME OVERHAUL KITS

CTP Inframe Overhaul Kits offer quality parts engineered to work together for maximum performance.

- » Superior durability to give extended life between overhaul repairs.
- » Reduced Brake in oil consumption for greater economy.
- » Incredible savings to keep your engine running profitably.
- » Inframe Kits may be built to oversize and undersize specifications.

LINERS

WET LINERS CTP wet liners are manufactured for faster Brake-in and durability. When rebuilding a Diesel engine that utilizes wet liners, machining is not required as they fit into a standard bore size. Replacing a Wet liner is a fairly simple "slip fit" installation, however liner projection is critical and must be carefully measured. **CTP Wet liners feature:** • Roll burnished under-the-flange radius provides superior strength and prevents fractures. • Induction heat-treated high-grade steel or gray iron construction offers greater strength and durability. • Precision manufacturing ensures perfectly round bores and correct cross hatch pattern for quick Brake-in and proper ring seating.

DRY LINERS / REPAIR SLEEVES There are several types of dry liners and repair sleeves; **Flanged dry liner**, this is a slip type fit, where machining of the block is not required, the flange holds the liner in place, the inside bore is finished and honed.

Interference fit dry liners; these liners must be pressed in place after removing the old liner from the block, some come prefinished and honed.

Repair sleeves, where the block must be bored to accept this type of sleeve, these are interference fit and require pressing, repair sleeves do not come with finished or honed ID. *

CTP Dry liners feature:

- High-grade steel or gray iron construction for durability and strength.
- Precise and uniform outside dimension for ease of installation.
- Pre-finished bore liners have accurate cross hatch pattern finish for quick Brake-in and proper ring seating. *

PISTON RINGS

CTP Piston Rings are constructed to optimize power output, decrease engine friction and greatly reduce blow-by gas and oil consumption. Our piston ring sets are designed for the latest engines, with precise tolerances, high manufacturing quality and materials that maximize engine performance. CTP Piston Rings have the technology and innovative product design to meet your needs.

CTP Piston Rings are technically optimized with:

- Advanced surface finish utilizing chrome plating, gas nitriding, spray coating and ceramic coating
- Superior base material such as gray cast iron, ductile cast iron and stainless steel
- High precision machining

The benefits:

1. Excellent sealing performance will dramatically reduce blow-by gas and oil consumption.
2. High anti-wear and Brakeage performance will assure you a longer part-life span.

CONNECTING ROD KITS

CTP Connecting Rod Kits come pre-assembled with all-new components, eliminating the need for specialty tools like ring expanders and compressors. Designed for efficiency, these kits ensure faster, hassle-free installation—saving time and labor costs.

ENGINE OIL PUMPS

The oil pump is the heart of the lubrication system. They are vital to protecting engine components from frictional wear and overheating. Oil lubricates moving engine parts to allow them to operate smoothly with less resistance and friction. A well lubricated engine increases the odds of a longer service life from its parts. The oil pump also helps disperse engine heat by providing a steady flow of oil and lubricating engine parts as they work and carrying heat away from the combustion area. CTP oil pumps ensure sufficient lubrication and smooth oil circulation.

CYLINDER HEADS

AUTHORIZED DEALER EXCLUSIVE

CTP Manufactured Diesel Cylinder Heads for your equipment

CTP cylinder heads are CNC machined to exact specifications using premium materials and state-of-the-art manufacturing to ensure the quality of every casting. CTP Cylinder Heads are available as budget-friendly bare Cylinder Heads for repairs, where re-usable parts are swapped over from the original cylinder head. We offer a complete inventory of new replacement valvetrain parts to complete the job.

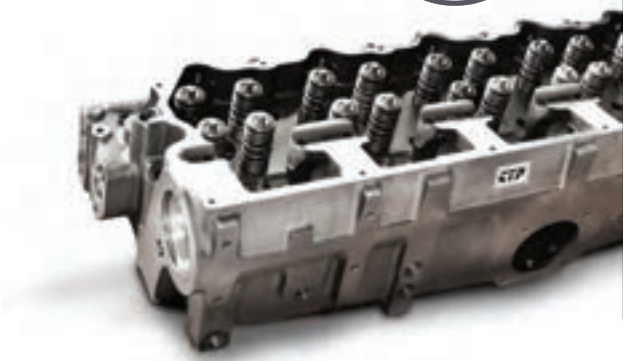
ASSEMBLED CYLINDER HEADS

AUTHORIZED DEALER EXCLUSIVE



CTP also offers complete Cylinder Heads fully built, ready to install. The heads are assembled using blueprinting methods; where all the parts and components are checked for proper fit prior to assembly. All of our cylinder heads are checked for dimensional accuracy, straightness and surface finish. The valve seats are micro finished and the assembled cylinder heads are vacuum leak tested to assure a positive valve to seat seal.

HIGH PERFORMANCE VALVES

AUTHORIZED DEALER EXCLUSIVE

Today's trends are shifting towards higher performance, fuel economy, natural resource conservation, and the introduction of special blended fuels. All these pose a special demand on Diesel engines, especially on the exhaust valves. One of the key requirements of exhaust valve materials is oxidation resistance. Nimomic® 80A alloy, a nickel-base, high temperature alloy, containing a high percentage of chromium, is characterized by excellent high oxidation resistance and super resistance to fatigue under very high temperature conditions.

CTP's new High Performance Nimomic® 80A super alloy Intake & Exhaust Valves offer rugged reliability, extended life and durability. This technology allows us to provide the highest level of performance and reliability for your engine.

HEAVY DUTY ENGINE OIL PANS

CTP has launched a new line of replacement oil pans for heavy-duty equipment engines, offering superior durability and performance. Our oil pans are constructed from high-grade materials that resist corrosion and withstand harsh operational conditions. Engineered for a perfect fit, they ensure effective oil containment and management, reducing the risk of leaks and enhancing engine lubrication. With their robust design, the new oil pans help extend engine life and maintain optimal performance, making them essential upgrades for heavy-duty machinery. Their ease of installation and compatibility with various engine models further add to their appeal for operators and maintenance professionals seeking reliable and efficient solutions.
